**Integrating Gender and Nutrition within Agricultural Extension Services (INGENAES)
Gender and Nutrition Technology Assessments**

Under the INGENAES project, CP developed a qualitative methodology to understand the potential gender-related and nutritional impacts of agricultural technologies on men and women. The technology assessment is compiled into a Technology Profile which provides recommendations on how to make technologies more attractive to men and women farmers and design distribution models for extension agents, input suppliers, and mobile devices to better reach men and women. It was piloted in Zambia and Bangladesh in 2015.
